

COOKIE PRODUCTION

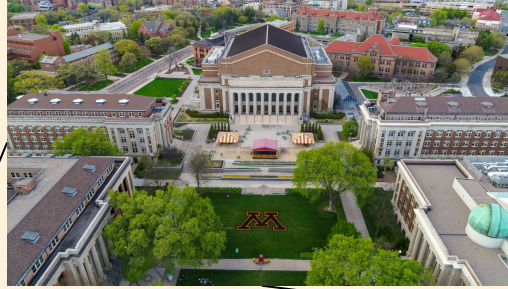

Slide Presentation by NZ Gorham

INTRODUCTION

**NAME:**

NZ Gorham

**COLLEGE:**

I am Junior at the University of Minnesota
Majoring in *Computer Engineering* along with a
Product Design Minor

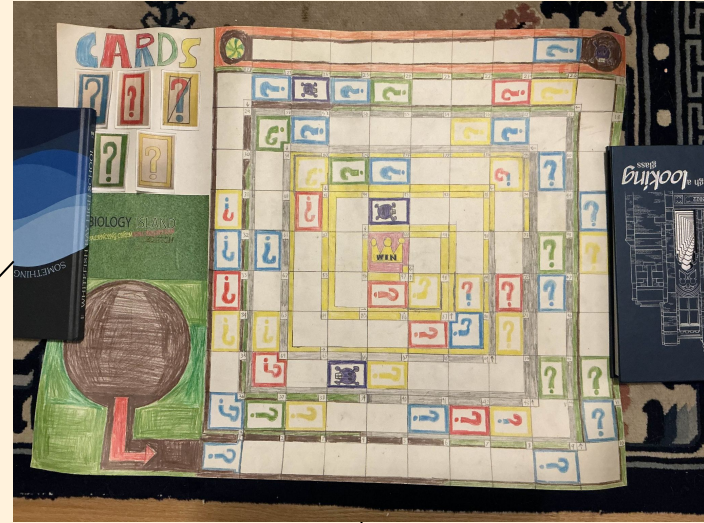

**ANIMATION:**

I am a huge animation fan

**INVOLVEMENTS:**

- Team Manager for the Minnesota Wrestling Program
- President/Volunteer for Campus Cleanup Crew
- Member of Solar Vehicle Project
- Work on personal projects

INTRODUCTION

ENGINEERING & DESIGN:

As a Computer Engineering student, there are so many things that I find fascinating: Apps, Products, etc; hence why Product Design would be a good fit in my background. I have done 2 product design classes last semester (PDES 2702 and MGMT 3015) and I got a lot out of those classes. I am looking forward to get more design background in me along with my engineering background.

FINAL COOKIE: PAWCOOKICLE

WHY THIS IS COOKIE IS CREATIVE

This cookie is creative because it represents my personal favorite animated film + character and I believe that not many cookie recipes include sweet potato so I want to take advantage of that to make an original cookie that includes sweet potato in it. I also believe that this is a good use of using a cake pop stick since the cookie is like a popsicle and it makes sense to have a stick with it. I would say that is a smart design. The inspiration behind this comes from Zootopia, specifically the pawpsicles that Nick Wilde makes. While the flavor of the pawpsicle is cherry or strawberry, I went with sweet potato since it's orange like Nick, but the frosting will still be strawberry so the outside of the cookie can look like the pawpsicle from the film.

FINAL COOKIE: PAWCOOKSICLE

INGREDIENTS

- 2¼ cups all-purpose flour
- ¾ tsp baking soda
- ½ tsp salt
- 1 cup (2 sticks) softened unsalted butter
- ¾ cup packed dark brown sugar
- ½ cup granulated sugar
- 1 tsp vanilla extract
- 2 large egg
- 2 cups of milk
- 1-2 sweet potatoes (depending on the size of the potato)

STEPS

- Mix all the ingredients except for the last one into a mixing bowl
- Bake 1-2 sweet potatoes in an air fryer for 20 minutes (depending on the size of the potato) at 400°
- Peel the skin off of the sweet potatoes and mix them in with the cookie dough batter
- Bake the oven at 375° for 14 minutes
- After baking, let them cool down for a bit
- Add red coloring frosting (optional)
- Use the pawpsicle cookie cutter to make the shape of the cookie into a paw and a stick at the bottom

RESEARCH

When it came to this assignment. I had many ideas in my head. But first, I asked Ingrid (bottom right image), a student taking DESI 2701, questions so I can get specific ideas to make a good cookie.

1. *What is a cookie you wouldn't eat?* Coconut
2. *What's your favorite dish/cuisine?* Mexican Food - Taco Bowl
3. *What's your favorite dessert?* Brownie
4. *What would taste good in a cookie?* New - Salty Chip, General - Peanut Butter
5. *Soft or crunchy?* Soft
6. *Do you have a favorite cookie flavor?* Chocolate Star
7. *What is the most memorable thing you have ever eaten?* Octopus
8. *Is healthy important?* No
9. *When it comes to the design of the cookie, how important the look of the cookie to you?* Pretty important, but is more important

Besides that, I also dugged through the internet (watching youtube videos and looking at bakery chef's profile) to gather inspiration ideas to make at least an original cookie and knowing how to make it stand out to the crowd.

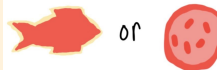

IDEA GENERATION (IDEAS: 1 to 5)

The IT Cookie:
Instead for a sugar cookie, it's a salted cookie. A good dessert for pranks and punishing losers like your in IMPRATICAL JOKERS

IDEA 1

The Swefish Cookie:
A swedish fish flavor cookie. The cookie will taste like a swedish fish & the shape will be either the fish itself or a Crumbl Cookie design

IDEA 2

COOZA:
A cookie pizza. This one looks like a fun one design with a variety of frosting colors.

IDEA 3

THE WILDE COOKIE
A cookie in the shape of Nick Wilde's face from Zootopia. This one will be a Wilde one.

IDEA 4

LITERAL STRAWBERRY:
This will be a cookie that will have strawberry flavor stuff in it. This cookie will literally taste like a strawberry (hopefully) and be in the shape of a strawberry

IDEA 5

IDEA GENERATION (IDEAS: 6 to 10)

HOMER FILLING:

This is a Homer Simpson Donut with filling inside.

Homer will love this cookie.

IDEA 6

The Hole:

The cookie is like a hole. The cookie will be like 3D $\frac{1}{2}$ circle but a little bit of dough will still be on top so there's a bit of ground.

IDEA 8

Pawcookie:

This is based the pawpsicle from Zootopia but this time it's a cookie
The flavor will be Strawberry or cherry.

IDEA 7

The JHOOP Cookie:

A carrot cake cookie of Judy Hopp from Zootopia. This ain't a dump cookie. This is a sly cookie!

IDEA 9

RESISTCOOKIE

A cookie the shape of a resistor. As a Computer Engineering student, I know that ECE students will like this one. #POWER

IDEA 10

MODEL: PROTOTYPE 1 - PAWCOOKICLE

I chose this cookie because I like Zootopia and Nick Wilde is one of my personal favorite characters. Plus, since he made pawpsicles, I figured “why not I make his pawpsicles into cookies”. The original flavor was going to strawberry or cherry, but since I want to try out something new and connect to pawpsicles to Nick, I decided to use sweet potato to be added into the batter. The reason is because Nick and sweet potatoes are orange and Nick a sweet character, but the frosting will still be strawberry just so it can be in the colors of the pawpsicles. When I tasted the batter with the sweet potato mixed in with it, it tasted great. I had high hopes for it. The only trouble I ran into was creating the shape of the cookie to be an actual paw (as you can see on the bottom right image, the cookies aren't shape like a paw). But, I didn't want that factor alone to be the reason to give up on this model considering my vision on how potential this cookie has.

MODEL: PROTOTYPE 2 - SWEFISH COOKIE

I chose this cookie because swedish fish one of my favorite candies to snack on and put in any dessert. I know that back in 2016, Oreo made a limited time oreo with the filling being swedish fish. So I want to test out my cooking creativity and give it my own twist on it. It sadly didn't turn out as how I wanted it to be. The main issue I ran into was trying to make a swedish fish to melt so it can be like a syrup supplement so it can mix well with the batter. At the same time, I don't want to overburn the swedish fish as well. When it came to the look of the cookie, it looks exactly like how I sketched it up to be. As for the taste, it is good, but the main issue was how I melted swedish fish that is inside the cookie batter became rock hard after I bake it and let them sit to cool off. I would like to improve and fix this cookie, but due to time constraints, I sadly have to drop this cookie model and save time to improve my Pawcookie.

TEST - PAWCOOKICLE

EVALUATION

- The taste of the cookie is how I want it to be: Sweet potato, but sometimes it doesn't taste I couldn't taste the sweet potato. I am also glad that the cookie is soft as how I want intended the cookie to feel. While the taste and texture is up to my expectations, the main issue I ran into was the design of the cookie. It was not like the idea generation sketch that I did.

POSSIBLE IMPROVEMENTS

- Bake the cookie longer so the texture doesn't feel like you are eating a muffin
- Add more sweet potato in the batter so the taste of the cookie feels like you are eating a sweet potato flavor cookie and a little less frosting
- Make the shape of the cookie look like more of an animal paw

ITERATIONS

- The main iteration I want to do is the shape of the cookie
- Another one is to make the cookie taste like a sweet potato, so I planned on adding one more
- Last major one is to bake it a bit longer so it's not like a muffin
- Would like to have cake pop sticks to go along with the cookies so it looks like a pawpsicle

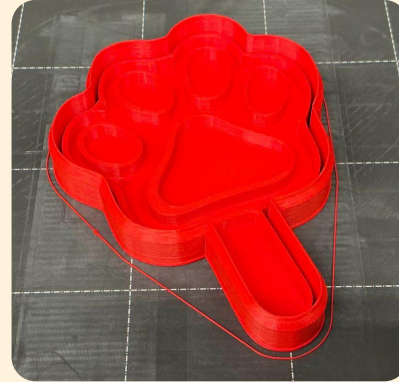

FEEDBACK

- Of the three people that tried out my two cookies, they all prefer the Pawcooksicle since the swefish didn't work out as how I want it to be. Luckily, it didn't taste bad at all
- "If I were to get cookie all the time. I wouldn't want frosting on it" -Curtis (Wrestling Trainer)
- "I like both of them, but I prefer the sweet potato one more" - Brandon Eggum (Head Coach for the Wrestling Program)

ITERATE

SECOND TRY

Gathering the feedback from my peers and notes my first attempt, I first looked up a 3D Printed cookie cutter model Nick's pawpsicle and I luckily found one on Cults3D. While the cutter was 3D printing, I baked two sweet potatoes and mixed them in the dough and the dough came a bit more orange, telling me that this can taste at least like a sweet potato. I also bought some cake pop sticks so I can have my cookie to look like a pawpsicle. The baking process went great! Cooking it longer made the cookie feel like it's not a muffin. When the cookie cutter was finally done printing, I finally got the shape that I wanted. I am so glad that I found this cutter online just in time. Overall, I am glad for how things turned out this time around.

ITERATE

TEST

Unfortunately, I wasn't able to get the all three people to tasted my cookie the first time I made them, but I was lucky enough to still have Coach Eggum to try out my cookies and he likes the design a lot more than how it was when I first made them and likes the detail that I added a stick to the cookie so it looks like a pawpsicle and . He also can taste more sweet potato in the cookie. I am so glad that my second attempt went successfully well and I am willing to continue making these cookies in the future and giving them out to friends and family.

Note: Since Coach Eggum was busy, I wasn't able to get a picture of him testing out my cookie or getting his reaction to it, but since he enjoys the improvements I made to the cookie, the photo on the right best describes his reactions
